Peering Into the Unstructured Data Abyss

Getting a handle on this unstructured data is becoming a C-suite priority for both offensive (GenAI) and defensive (regulatory) reasons. But the very nature of unstructured data makes it difficult to manage. After all, how do you classify words and pictures? How do you archive petabytes of log files? And perhaps most importantly, how do you enforce access control across thousands of disparate data silos?

A Conversation with Piyush Mehta, CEO, Data Dynamics, on Enterprise Data Management and Data Sovereignty

As AI fundamentally reshapes everything - from households, governments, and trade to industries, data has evolved from a valuable asset to the lifeblood of innovation and decision-making. During a recent conversation with InsightJam.com, Piyush Mehta, CEO of Data Dynamics, highlighted a profound insight: "Data has become a national asset." This perspective reflects the changing reality—data isn't just fueling AI models and

Year-End Insight: Top Tech Trends for 2025

2025 is poised to be a tech blockbuster, with AI taking the driver's seat, edge computing reshaping connectivity, and sustainability finally getting its tech moment in the sun. From immersive realities blurring the lines between virtual and real to autonomous systems becoming smarter (and sassier), the year ahead is all about bold moves and bigger bets. The question isn't whether you'll keep up—but how fast you'll adapt to ride the wave of innovation.

Navigating the DPDP Act: Key Implications and Future Trends for Businesses

The DPDP Act is here, and it's not just a compliance checkbox—it's a game-changer. With its focus on accountability, transparency, and citizen-first data rights, businesses are staring at a pivotal moment: adapt or get left behind. As the guardrails tighten around data handling, the future of business isn't just about meeting regulations—it's about thriving in a privacy-driven world. So, what's the playbook for enterprises navigating this shift?
